

Evaluation of the module Connective Communication (*Engineering Experience 2; EM*)

Students who participate in all sessions and submit the writing assignment will receive a score for this module. Students who do not meet these conditions will receive an NA ['not participated'] instead of a score.

Guidelines regarding the assignment:

- Students are to complete an individual writing assignment, which every student is to submit through the EE2-community on Toledo.
- During the class sessions time will be taken for working on the assignment. Hence, students are to bring a laptop (or equivalent) to all sessions.
- The deadline for submitting the assignment is April 3, 2026 (11.59 pm) at the latest. In case of late submission, one point (/20) will be docked per day.
- The word count for the assignment is 1 000 words (+/- 10%), excluding the 'context' section (which can be as short or long as you believe is needed). In case these margins are not respected, 1 point (/20) will be taken away for each additional 10% band. Mention the grand total word count of steps 1 – 5 of your assignment (so excluding the 'context') at the bottom of your text.
- The assignment includes five steps, as defined below. Students are to include these steps in the given order and indicate them explicitly in their document (so include the title 'Step 1', followed by your text, then the title 'Step 2a' et cetera). Steps that are not indicated in this manner may be considered as not valid.

If you do not object to this, we would be grateful if you could add the following statement of consent above your task:
'I agree to this work being used anonymously for research, educational and training purposes.'

Definition of the assignment:

Select a personal team experience, that is an incident or a success experience during a group task in which you were personally involved along with fellow students, preferably within the context of the course *Engineering Experience 2*. Choose an experience that is sufficiently rich for demonstrating your mastery of Connective Communication through the following five steps.

Do not forget to copy the structure below (five steps) in your document.

- **Context:** (optional) If useful, first briefly outline the context of the event you are going to describe. This part is not to be included in the word count.
- **Step 1:** Present a description of your experience that is as objective as possible, in the way that a camera or microphone would capture it.
- **Step 2:** Describe several thoughts as well as several, sufficiently diverse feelings that occurred **(a)** at the time that the events took place and again **(b)** now, when you look back on your experience.
- **Step 3:** Match the feelings with underlying needs and briefly explain the relationship between these needs and the associated feelings.
- **Step 4:** Based on the needs of all parties involved, formulate three connective requests that you made or could have made at the time the events took place. Briefly explain how each request relates to the mentioned needs.
- **Step 5:** Illustrate both the possibilities and the limitations of connective communication **(a)** with one example from the specific personal experience that you have just described, and **(b)** with one concrete and plausible situation in your future workplace as an engineer.
